- Great Western
- Mustang
- Dusk 'til Dawn

# Great Western

High priority splay corridor with gold anomalism untested by drilling

- Drilling by previous holder targeted the intrusion itself – no follow up.
- Extremely strong Mo-Bi-Te anomalism remained unexplained.
- Mafic-intermediate contact.
- Significant structural complexity – intersection of shear zones; intrusions; NE cross cutting features.
- Modelling of Great Western intrusion.

# Great Western

High priority splay corridor with gold anomalism untested by drilling

- GML soil sampling and lag sampling identified key gold trends.<sup>1</sup>
- Follow-up prospecting activities have returned over 100 gold nuggets around the margin of the Great Western Intrusion.<sup>2</sup>
- Multiple drill targets have been generated from this work.
- Two stratigraphic diamond holes - scheduled to be drilled at Great Western in December 2025.

## Confirmation of significant gold mineralisation

### Cautionary Statement:

Visual estimates of mineral abundance should never be considered a proxy or substitute for laboratory analyses where concentrations or grades are the factor of principal economic interest. Visual estimates also potentially provide no information regarding impurities or deleterious physical properties relevant to valuations.

The gold mineralisation reported is in nuggety form. The minerals visually observed is native free gold, however, being nuggets, they have not been assayed to confirm purity and if any other trace elements may be present. The Company notes gold nuggets showing this colour typically have a high gold purity.

The abundance of gold is constrained to the 134 nuggets reported. The nuggets range in size from 1.5 grams to approximately 26.5 grams and have an angular habit. The nuggets were discovered near surface on tenement E69/2765 to a maximum depth of approximately 40cm using metal detecting equipment. The nuggets are not representative of the entire area with approximately 60% of the nuggets confined to an area approximately 200m (north-south) x 100m (east-west) – centered around 265,380mE and 7,133,110mN (Grid MGA94 Zone 51). The remainder of the nuggets were dispersed along the recently defined surface sampling gold anomaly for approximately 1.2 kilometres of strike on tenement E69/2765.

The Company will undertake additional exploration activities to further assess the abundance of gold within the area where the nuggets were discovered, and across the wider Yandal Project. As previously announced, a wider soil sampling program is ongoing, to map this new anomalous gold trend to Horse Well. A trial 2D IP survey line will also be undertaken across the peak gold anomaly defined to date across Great Western. This survey will be completed once the 3D IP survey across Dusk 'til Dawn has been finalised. Both set of results will be released to the market in due course. Drilling plans will be released to the market after the Company receives and reports these results.

Refer to ASX Announcement dated 17 September 2025 for full details regarding nugget samples.
